PROFILE

Applied machine learning and NLP specialist finishing a Computer Science degree at Bina Nusantara University, with production experience shipping AI systems end to end — a transformer-based NLP framework for coffee-origin classification, a self-hosted RAG customer-support chatbot, and an automated image-to-video generation pipeline. Proficient in Python, PyTorch, Hugging Face, Docker, and retrieval systems.

WORK EXPERIENCE

Software Engineer Intern — Optimaxx Prima Teknik

Aug 2025 – Feb 2026

Kemayoran, Jakarta Utara, Indonesia

- Built a self-hosted WhatsApp customer-support chatbot on Ollama (DeepSeek R1) with a Retrieval-Augmented Generation pipeline, fully Dockerized so every inference ran on local hardware — no per-token API cost and no customer data leaving the company network.
- Designed message classification and routing logic separating internal from external queries, so staff were only surfaced messages the bot could not answer from the knowledge base; paired it with a dashboard for monitoring chat history and system activity.
- Engineered an end-to-end Telegram bot turning a single food image into a publish-ready 16-second vertical video with no manual editing step: Gemini 2.5 Pro for metadata and SRT scripting, Veo 3 for dual 8-second segments, Gemini TTS for narration, plus subtitle burning, intro compositing, audio mixing, and automated publishing to YouTube and TikTok via OAuth.
- Shipped an online class-management system on AppSheet and Google Sheets, replacing a manual registration process with automated approval workflows and email notifications.

EDUCATION

Bina Nusantara University — BSc Computer Science

Aug 2022 – Expected 2026

Tangerang, Indonesia · GPA: 3.72 / 4.00 · All coursework completed, degree conferral pending

Coursework: Data Mining, Machine Learning, Computer Vision, Software Engineering, Web Development

University of Nottingham Malaysia — Exchange Semester

Jan – May 2025

Semenyih, Malaysia · GPA: 3.80 / 4.00

Coursework: Artificial Intelligence Methods, Designing Intelligent Agents, Image Processing, Data Visualization

PROJECTS

Coffee Origin Classification and Recommendation System

Feb – Apr 2026

Python, PyTorch, Hugging Face Transformers, scikit-learn, Sentence-Transformers

- Scraped and cleaned 9,009 expert tasting notes, then fine-tuned RoBERTa to classify coffee origin at ~85% regional accuracy.
- Built a content-based recommender using dense retrieval over BGE and E5 embeddings, surfacing similar coffees from free-text flavour descriptions.

5G Impact on the Gaming Industry

Feb – Apr 2025

Python, XGBoost, Plotly, Folium, Scapy, HTML

- Developed an interactive web dashboard correlating 5G coverage with network latency and gaming adoption trends, owning the full path from live packet capture to geospatial visualisation.

Counter Strike Market Analyzer

Feb – Apr 2025

Python, ARIMA, LSTM, XGBoost, Gradio

- Benchmarked ARIMA, LSTM, and XGBoost to forecast CS:GO in-game item prices, then deployed the best-performing model behind a Gradio interface for interactive trend analysis.

Image Processing Pipeline for Flower Segmentation

Feb – Apr 2025

Python, OpenCV

- Researched and benchmarked preprocessing techniques — colour-space conversion, thresholding, and morphological operations — to improve segmentation accuracy on a shared image set.

Face Recognition using the LBPH Algorithm

Sep – Dec 2024

Python, OpenCV

- Led the design and implementation of a Local Binary Pattern Histogram recogniser at the core of a real-time celebrity identification system, from face detection through to live classification.

Fraud Detection in E-Commerce

Sep – Dec 2024

R, Random Forest, XGBoost

- Merged several public transaction datasets into a single training set, then implemented the core pipeline and trained supervised models to flag fraudulent online purchases.

Smoking Detection using YOLOv8

Feb – Jun 2024

Python, Ultralytics YOLOv8

- Designed and implemented a real-time smoking detection system for public spaces, independently handling dataset preparation, model integration, and inference code.

TECHNICAL SKILLS

Languages: Python, R, SQL, Go, C/C++, C#, Java/JavaScript, HTML/CSS

ML & Data: PyTorch, Hugging Face Transformers, scikit-learn, XGBoost, OpenCV, YOLOv8, Sentence-Transformers, RAG, LLM fine-tuning, time-series forecasting

Tools & Platforms: Docker, Git, Ollama, Gradio, MySQL, Google Gemini / Veo APIs, Alibaba Cloud, Figma

CERTIFICATIONS

Machine Learning with Python — freeCodeCamp

Jun 2024

ACA Cloud Computing — Alibaba Cloud

May 2024

Go: The Complete Developer's Guide (Golang) — Udemy

Aug 2026

IELTS Academic — Overall Band 7.5 (CEFR C1)

Jun 2024

LANGUAGES

Indonesian (native) · English (professional working proficiency, IELTS 7.5)
